

BN552 1x 4 Analogue Video Distribution Amplifier

Description:

- 1 input, 4 outputs distribution amplifier
- 75 Ω impedance-matched outputs to prevent reflections
- Low noise and distortion for accurate signal reproduction
- Output isolation to avoid loading effects
- Compact, rugged design built to Bluebell's broadcast standards

BN552

The Bluebell BN552 1 x 4 Analogue Video Distribution Amplifier is designed to deliver a clean, reliable split of a single analogue video source to four independent outputs. Each output is a precise replica of the input signal, maintaining the highest levels of stability and consistency. Engineered to

With features such as 75 Ω impedance matching, output isolation, and the amplifier is able to compensate for signal losses over longer cable runs while preventing interference between connected devices. Its compact, rugged construction makes it well suited to both fixed installations and mobile production environments.

Combining proven Bluebell reliability with broadcast-grade performance, the BN552 is an ideal solution for broadcasters, production companies, and professional AV users who require dependable analogue video distribution without compromise.
