

# Bluebell

## Chronos

- Support for video signals 12G-SDI - SD-SDI
- Dual genlock out on TX and looped output on RX
- 1 x gigabit Ethernet connection
- 12V DC input 4-pin XLR power connection
- Compact and robust enclosure suitable for OB applications

Chronos is your ultimate remote connection solution that offers transport of 12G-SDI, genlock and multi-rate Ethernet over a single fibre.

This transmitter and receiver pair address the requirement for connecting 4K cameras, control signals, and camera synchronisation from a remote site to base. Chronos has the added ability to accept an LC fiber optical signal input, which is then transported over the link to the receiver, ideal for sending another Singlemode optical signal over the same fiber.
